Contents

Preface	xi
1 Introduction	1
1.1 Brief History	1
1.2 Applications	5
1.3 Concepts	6
1.4 Graphics Pipeline	8
1.5 Image Buffers	12
1.6 Graphics Hardware	16
1.7 Conventions	25
2 Rasterization Algorithms	27
2.1 Introduction	27
2.2 Mathematical Curves and Finite Differences	29
2.3 Line Rasterization	32
2.4 Circle Rasterization	36
2.5 Point-in-Polygon Tests	38
2.6 Polygon Rasterization	40
2.7 Perspective Correction	48
2.8 Spatial Antialiasing	49
2.9 Two-Dimensional Clipping Algorithms	56
2.10 Exercises	70

3	2D and 3D Coordinate Systems and Transformations	73
3.1	Introduction	73
3.2	Affine Transformations	74
3.3	2D Affine Transformations	76
3.4	Composite Transformations	80
3.5	2D Homogeneous Affine Transformations	83
3.6	2D Transformation Examples	85
3.7	3D Homogeneous Affine Transformations	94
3.8	3D Transformation Examples	97
3.9	Quaternions®	108
3.10	Geometric Properties	113
3.11	Exercises	114
4	Projections and Viewing Transformations	117
4.1	Introduction	117
4.2	Projections	118
4.3	Projection Examples	125
4.4	Viewing Transformation	129
4.5	Extended Viewing Transformation	136
4.6	Frustum Culling and the Viewing Transformation	140
4.7	The Viewport Transformation	141
4.8	Exercises	142
5	Culling and Hidden Surface Elimination Algorithms	143
5.1	Introduction	143
5.2	Back-Face Culling	145
5.3	Frustum Culling	146
5.4	Occlusion Culling	151
5.5	Hidden Surface Elimination	158
5.6	Efficiency Issues	168
5.7	Exercises	173
6	Model Representation and Simplification	175
6.1	Introduction	175
6.2	Overview of Model Forms	176
6.3	Properties of Polygonal Models	177
6.4	Data Structures for Polygonal Models	179

6.5	Polygonal Model Simplification	183
6.6	Exercises	189
7	Parametric Curves and Surfaces	191
7.1	Introduction	191
7.2	Bézier Curves	192
7.3	B-Spline Curves	206
7.4	Rational Bézier and B-Spline Curves	221
7.5	Interpolation Curves	226
7.6	Surfaces	239
7.7	Exercises	246
8	Subdivision for Graphics and Visualization	249
8.1	Introduction	249
8.2	Notation	250
8.3	Subdivision Curves	251
8.4	Subdivision Surfaces	255
8.5	Manipulation of Subdivision Surfaces	270
8.6	Analysis of Subdivision Surfaces [®]	277
8.7	Subdivision Finite Elements [®]	283
8.8	Exercises	299
9	Scene Management	301
9.1	Introduction	301
9.2	Scene Graphs	303
9.3	Distributed Scene Rendering	315
9.4	Exercises	319
10	Visualization Principles	321
10.1	Introduction	321
10.2	Methods of Scientific Exploration	323
10.3	Data Aspects and Transformations	325
10.4	Time-Tested Principles for Good Visual Plots	328
10.5	Tone Mapping	331
10.6	Matters of Perception	335
10.7	Visualizing Multidimensional Data	338
10.8	Exercises	341

11	Color in Graphics and Visualization	343
11.1	Introduction	343
11.2	Grayscale	343
11.3	Color Models	350
11.4	Web Issues	361
11.5	High Dynamic Range Images	362
11.6	Exercises	365
12	Illumination Models and Algorithms	367
12.1	Introduction	367
12.2	The Physics of Light-Object Interaction I	368
12.3	The Lambert Illumination Model [®]	372
12.4	The Phong Illumination Model	376
12.5	Phong Model Vectors	383
12.6	Illumination Algorithms Based on the Phong Model	390
12.7	The Cook–Torrance Illumination Model [®]	398
12.8	The Oren–Nayar Illumination Model [®]	405
12.9	The Strauss Illumination Model [®]	411
12.10	Anisotropic Reflectance	414
12.11	Ambient Occlusion	417
12.12	Shader Source Code	422
12.13	Exercises	426
13	Shadows	429
13.1	Introduction	429
13.2	Shadows and Light Sources	431
13.3	Shadow Volumes	433
13.4	Shadow Maps	448
13.5	Exercises	461
14	Texturing	463
14.1	Introduction	463
14.2	Parametric Texture Mapping	464
14.3	Texture-Coordinate Generation	470
14.4	Texture Magnification and Minification	486
14.5	Procedural Textures	495
14.6	Texture Transformations	503
14.7	Relief Representation	505

14.8	Texture Atlases®	514
14.9	Texture Hierarchies	525
14.10	Exercises	527
15	Ray Tracing	529
15.1	Introduction	529
15.2	Principles of Ray Tracing	530
15.3	The Recursive Ray-Tracing Algorithm	537
15.4	Shooting Rays	545
15.5	Scene Intersection Traversal	549
15.6	Deficiencies of Ray Tracing	559
15.7	Distributed Ray Tracing®	561
15.8	Exercises	564
16	Global Illumination Algorithms	565
16.1	Introduction	565
16.2	The Physics of Light-Object Interaction II	566
16.3	Monte Carlo Integration	573
16.4	Computing Direct Illumination	576
16.5	Indirect Illumination	590
16.6	Radiosity	605
16.7	Conclusion	611
16.8	Exercises	611
17	Basic Animation Techniques	615
17.1	Introduction	615
17.2	Low-Level Animation Techniques	617
17.3	Rigid-Body Animation	632
17.4	Skeletal Animation	633
17.5	Physically-Based Deformable Models	637
17.6	Particle Systems	639
17.7	Exercises	641
18	Scientific Visualization Algorithms	643
18.1	Introduction	643
18.2	Scalar Data Visualization	646
18.3	Vector Data Visualization	660
18.4	Exercises	672

A	Vector and Affine Spaces	675
A.1	Vector Spaces	675
A.2	Affine Spaces	682
B	Differential Geometry Basics	685
B.1	Curves	685
B.2	Surfaces	691
C	Intersection Tests	697
C.1	Planar Line-Line Intersection	698
C.2	Line-Plane Intersection	699
C.3	Line-Triangle Intersection	699
C.4	Line-Sphere Intersection	701
C.5	Line-Convex Polyhedron Intersection	702
D	Solid Angle Calculations	705
E	Elements of Signal Theory	709
E.1	Sampling	709
E.2	Frequency Domain	710
E.3	Convolution and Filtering	711
E.4	Sampling Theorem	715
	Bibliography	717
	Index	744
